The Modern Green Space Industry can be Described as the Planet's Great Conservationist with its Outstanding and Innovative Ideas

Day after day after day — written in the newspapers, heard on the radio, seen on the television, and displayed throughout cyberspace — the Environmental-Terror-Movement (a.k.a. the ecology or natural lawn care movement) is urging for measures to TERRORIZE and DESTROY the Modern Green Space Industry, with ideas that have little basis in fact or science.

Nonetheless, the Environmental-Terror-Movement has gained some powerful allies, such as law-makers and policy-makers who are spineless and naïve co-conspirators.

Many versions of the following phrase have been heard — the world would be a better place if lawns and golf courses were maintained more ecologically or more naturally.

If each of us received five cents every time we heard this phrase, we would be literally spitting gold ingots.

Let's think for a minute ! How does this phrase really apply to the Modern Green Space Industry ? It's not complicated.

The MODERN GREEN SPACE INDUSTRY CAN BE DESCRIBED AS THE PLANET'S GREAT CONSERVATIONIST.

For generations, the Modern Green Space Industry has been maintaining and conserving the world's largest ground cover vegetation, and has CONTRIBUTED EXTENSIVELY TO THE BEAUTIFICATION OF OUR URBAN LANDSCAPES, and THE PRESERVATION OF OUR ENVIRONMENT.

By contrast, Enviro-Maniac-Activists, and their Environmental-Terror-Organizations, can be more precisely identified as RADICAL PRESERVATIONISTS that could not care less about the beautification of our Urban Landscape.

Enviro-Maniac-Activists pretend that the use of pest control products is not compatible with natural settings.

Enviro-Maniacs prefer JUNK LAWNS and JUNK LANDSCAPES

Nonetheless, Environmental-Maniac-Activists have pretentiously proclaimed that the natural environment needs their stewardship.

Enviro-Maniac-Activists are obsessed with preserving our world with ANTI-MODERNIST and ANTI-TECHNOLOGY thinking. They thrive on JUNK SCIENCE, and resort to LIES rather than the truth.

It is a fact that Enviro-Maniac-Activists are inherently OPPOSED to the modern maintenance of turfgrasses and the beautification of the Urban Landscape. (One notable exception is Audubon International, but not Audubon state organizations.)

Enviro-Maniac-Activists PREFER JUNK LAWNS and JUNK LANDSCAPES that are unaltered by human activity, and are INFESTED with damaging weeds, insects, and disease ... just as the Enviro-Maniacs INFEST our society.

These ENVIRO-TERRORISTS particularly dislike the cosmetic standards used for the maintenance of golf courses, which are arbitrarily considered too lofty.

Enviro-Maniac-Activists are re-enacting the needless conspiracy against DDT. They are proceeding to TERRORIZE and ANNIHILATE the Modern Green Space Industry, just like they did with the makers of DDT !

Interesting and Innovative Ideas for the Green Space Industry

Goats Becoming New Trend in Lawn Care

August 9th, 2010

Fox News Channel

The latest trend in lawn care does not have four wheels. Try four legs. Across North America, GOATS are being put to work in the backyards of homes and businesses alike.

They don't need to be specially trained, since it is their natural instinct to eat any and every green thing they see — although this can prove problematic when using them for anything other than brush and weed control.

Still, more and more people are trying out this BOGUS alternative to weed-whacking and lawn-mowing because the goats have a minimal carbon footprint. And they work for cheap.

At New York's Vanderbilt Mansion, located about ten miles away from where former President Clinton's daughter was married, grounds-keepers are using nine goats borrowed from a local farm to maintain five acres of property.

It will take the animals four months to clear the area, which features a steep hillside that has given human landscapers difficulty in the past.

The total cost for the project is 9,000 dollars. Sounds like a lot, but it's actually quite a bargain considering it costs them 15,000 dollars to hire humans for the job. Plus, with the goats, the hill-side remains clear all summer long and into the fall.

But the smell is another story. It does smell a little like a barnyard. But, with weed-eaters, there would be combustion from the engines coming up over the hills. So, it's just a trade-off.
