

We have all heard the story of a man who was attacked and almost killed by KILLER BEES. Since you can never be sure where the KILLER BEES will attack, it is recommended to take the appropriate precautions, and ALWAYS wear a protective bee suit. In fact, it is probably a good idea NEVER to leave your home. Just in case the KILLER BEES attack and kill you. The chances of somebody anywhere in Canada being harmed by KILLER BEES is INSIGNIFICANT. The same can be said of conventional pest control products.
