Fluoride's Impact on Brain - Focus of Two Conferences

[The Nature of Government](#)

How can collateral damage such as "impairments to the liver, kidney, brain, bones, pineal gland, thyroid, and even teeth* trump the paltry, if not outright questionable, benefits to teeth be considered a health benefit?

"Careful, bonafide laboratory experimentation by conscientious, patriotic research chemists, and actual medical experience, have both revealed that instead of preserving or promoting 'dental health,' fluoridated drinking water* destroys teeth, before adulthood and after, by the destructive mottling and other pathological conditions it actually causes in them, and also creates many other very grave pathological conditions in the internal organisms of bodies consuming it. How can it be called a "health" plan? What's behind it?

That any so-called "doctors" would persuade a civilized nation to add voluntarily a deadly poison to its drinking water systems is unbelievable. It is the height of criminal insanity."

Why is the damage from fluoride and its co contaminants so harshly and recklessly being ignored and covered up over the real threat to the people they are supposed to protect?

Subject: Press Release for [ISFR/FAN Conference](#)

Dr. Gideon Foreman (Canadian Association of Physicians for the Environment) will be introducing Dr. Vivian Howard (president of the International Society of Doctors for the Environment) at the FAN conference. Please pass this on.

Carole

New York – July 31 — New science indicating fluoride's dangers to the brain and other organs will be presented by prominent fluoride research scientists during back-to-back conferences of the International Society for Fluoride Research (ISFR) and the Fluoride Action Network (FAN) in Toronto August 7-11.

Fluoride, added to water supplies ostensibly to prevent tooth decay, is also in virtually all non-organic foods and beverages. Fluoride's brain effects were never examined prior to water fluoridation.

Recently, because of health concerns, [Health Canada](#) recommended that [fluoride levels be lowered in Canadian water supplies](#), children's toothpaste and infant formula but claims that "the weight of evidence does not support a link between fluoride and intelligence quotient deficit."

"It is hard to believe that any "weight of evidence" analysis could possibly dismiss fluoride's neurological impacts. There have now been over 40 animal studies which show that fluoride can damage the brain, and no less than 18 studies which show that fluoride lowers IQ in children, and only 2 that don't. I look forward to reading the full report when it is made available," says Paul Connett, PhD, FAN Executive Director.

According to ISFR conference organizer, Dr. Hardy Limeback, "Our conference features experts who researched the dangers that fluoride poses to human health. Our keynote speaker, [Dr. A.K. Susheela](#), (Executive Director,

Fluorosis Research and Rural Development Foundation, India) probably knows more about fluoride's toxic effects to the body than any other living scientist. It is important that officials who promote water fluoridation hear what she and others have to say," says Limeback.

Susheela can also explain to Medical Doctors, often untrained in fluoride toxicology, how to diagnose, treat and reverse early fluoride toxicity symptoms which can mimic arthritis and irritable bowel syndrome.

The latest issue of ISFR's journal, [Fluoride](#), published 12 newly-translated Chinese studies, which report fluoride's effects on the brain, including the lowering of IQ in children. These and other brain studies will be reviewed at both conferences.

Coupled with these conferences, the Toronto-based Citizens for a Safe Environment (CSE) will host two public meetings with FAN in downtown Toronto on Monday August 11.

According to [CSE](#) director Karen Buck, "These meetings will give the public information they don't get from our government or dental organizations. In the afternoon, a panel will address the question of whether Toronto should stop fluoridating its water. In the evening experts will explain fluoride's dangers to health."

After receiving an invitation to attend these meetings, the Ontario Dental Association (ODA) sent out a [news release](#) urging legislators and communities to stand up in support of fluoridation; but they won't do so, themselves.

"The best way that the ODA can get communities and politicians to stand up for water fluoridation is to provide, in person, a cogent and scientifically-referenced defense of fluoridation at the afternoon forum," says [CSE](#) President Karen Buck. ODA has yet to respond.

At all three events, Dr. Vyvyan Howard, an infant and fetal pathologist, and president of the International Society of Doctors for the Environment, will be presenting a major review of studies on fluoride's brain effects, including the translated Chinese studies.

"The best way to lower children's fluoride intake, as Health Canada suggests, is to stop fluoridation," says Connett. "It makes no sense to prescribe fluoride drugs to children via the water supply at levels which are between 150 and 250 times higher than the level in mothers' milk."

For details on both conferences go to <http://www.FluorideAlert.org>

For the CSE/FAN public events go to <http://fluoridealert.org/august.11.html>
