Non-occupational

8. How did exposure occur? (Select all that apply)

Other

9. If the exposure occured during application or re-entry, what protective clothing was worn? (select all that apply)

Unknown

10. Route(s) of exposure.

Skin

11. What was the length of exposure?

Unknown / Inconnu

12. Time between exposure and onset of symptoms.

<=30 min / <=30 min

13. Provide any additional details about the incident (eg. description of the frequency and severity of the symptoms, type of medical treatment, results from medical tests, outcome of the incident, amount of pesticide exposed to, etc.)

1-38161640 - The reporter indicated that she was exposed to an herbicide containing the active ingredient ferric HEDTA. Just prior to initial contact with the registrant the reporter was turning the knob on the product package when it sprayed out and spilled on her hand. She washed her hand immediately but at the time of the call she had a red mark where the product had contacted her hand. The reporter indicates that she does have sensitive skin and she is in her (age)s. The reporter was advised that dermal contact may cause transient skin irritation, after rinsing treatment with vitamin E and aloe products was recommended. The reporter could not be reached on follow-up. No further information is available.

To be determined by Registrant

14. Severity classification.

Minor

15. Provide supplemental information here.
