

Optimal Disease Control - Now Easier to Use

Daconil has proven itself to be the premium contact fungicide. And now, years of research and investment in formulation advancement have resulted in a remarkably high standard in disease protection.

WeatherStik Technology

Daconil ULTREX provides extended protection, even after heavy rains or irrigation. Similar to the flowable formulation, Daconil ULTREX has a built-in surfactant, adjuvant and compatibility system called WeatherStik. It provides superior adhering power for extended coverage on the crown and sheath of grass blades.

Resistance Management Tool

A contact fungicide, Daconil ULTREX has a multi-site mode of action, attacking the pathogen at several biochemical sites. This makes it an effective resistance management tool. To assure continued product effectiveness, take a proactive approach to resistance management. Include the use of Daconil ULTREX as a stand alone product or as a tank-mix partner with other products having different modes of action. The following products are registered tank mix partners of Daconil ULTREX:

- ~ Banner MAXX
- ~ Heritage MAXX
- ~ Primo MAXX

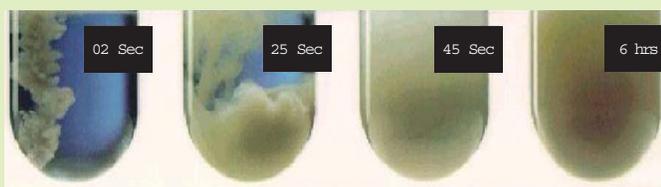

Advanced Formulation Technology Creates:

Easy Measuring - Because the formulation of Daconil ULTREX is approximately the size of a grain of sand, it pours and measures easily. And at the most common use rate of 115 g/100m² for dollar spot, one (2.27kg) bag of Daconil ULTREX treats 1/2 an acre.

Faster Loading - Plus, there's no static electricity when Daconil ULTREX is poured, allowing the product to flow completely from the bag, eliminating the need to triple rinse. Simply tear the bag and dispose according to provincial regulations. That means more time spraying and less time cleaning up.

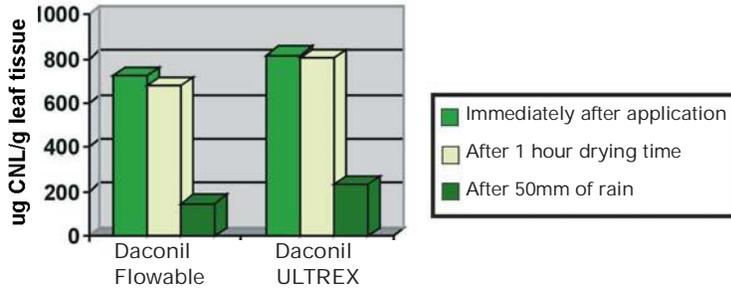

Better Mixability - When mixed, Daconil ULTREX goes into suspension quickly and stays there at least 6 hours for consistent, easy spraying from start to finish.

Light Weight Package - A case of Daconil ULTREX weighs 11 kg, making it much easier to lift and handle. There are four 2.27kg bags of Daconil ULTREX per case.

Foliar Retention of Chlorothalonil

Karen Meade: Biokinetics, JH Dec 2005

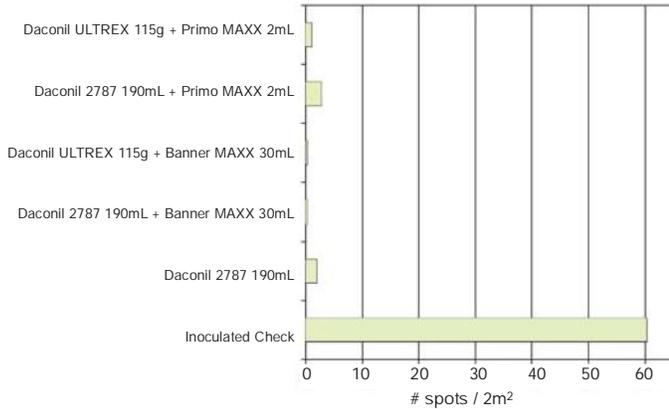

Weatherability

With the unpredictability of weather, you need products that stick and stay. WeatherStik makes Daconil ULTREX last through rain. Research under extreme conditions shows that foliar spray retention of Daconil ULTREX alone was not significantly different from that of Daconil 2787 Flowable alone.

Optimal Disease Control

Daconil ULTREX provides broad spectrum contact protection against 7 of the toughest turfgrass diseases. Daconil ULTREX delivers the same great disease control you've come to depend on with Daconil 2787 Flowable.

Dollar Spot

2004 GTI, average June 16th – July 8th, 4 data sets

Product Rate Conversion & Coverage

Daconil ULTREX is almost double the concentration of the flowable formulation, so less product is required to deliver equivalent amounts of active ingredient.

Daconil 2787 Flowable (rate per 100 m²)	=	Daconil ULTREX (rate per 100 m²)	One 2.27kg bag covers (in acres)	One case covers (in acres)
48 mL	=	29 g	2	8
95 mL	=	58 g	1	4
120 mL	=	73 g	0.75	3
190 mL	=	115 g	0.5	2
240 mL	=	145 g	0.4	1.6
500 mL	=	303 g	0.2	0.8
