

## All Season Turf Density

5★ = Outstanding, 4 = Very Good, 3 = Good, 2 = Moderate, 1 = Poor

★★★★★ Summer Turf Density

★★★★★ Spring Turf Density

★★★★ Fall Turf Density

★★★★ Leaf Texture

★★★★★ Genetic Color

★★★★ Winter Turf Density

✓ The increased turf density helps crowd out weeds and *Poa annua*

✓ Fine leaf texture and dark green color make it an excellent choice used alone or for blending

**Awesome** Kentucky bluegrass (*Poa pratensis*) is an “aggressive type” particularly well-suited for adding to cool-season turf mixtures or bluegrass blends. It was NTEP top rated for quality in the Northeast, Transitional Zone, Midwest, and Great Plains with no statistical difference between **Awesome** (J-1420) and the top rated variety in those trials.

**Turf Density:** **Awesome** was given the best turf density score of all the

bluegrasses in the 2000 NTEP trials during spring and summer and had no statistical difference from the top scoring variety for density during fall and winter! The increased density helps crowd out weeds and *Poa annua*.

**Excellent Turf Quality:** **Awesome**'s fine leaf texture is similar to Midnight and Rugby II making it an awesome choice to use alone or blend with other elite Jacklin Kentucky bluegrasses to increase the density of your turf stand. Its dark green color is compatible in a mix with other cool-season turfgrasses and it has a lower growth habit.

**Good Disease Resistance:** Disease resistance is excellent and in 3 of the 4 Maintenance Schedules in the 2000 NTEP trials, there is no statistical difference between **Awesome** Kentucky Bluegrass and the top rated variety.

**Seeding Rate:** 2-3 lbs./1000 ft<sup>2</sup> (10-15 g/m<sup>2</sup>) by itself or blended with other bluegrasses. Mix **Awesome** with 20% ryegrass or 80% tall fescue.
