BOGUS Practices That DO NOT CONTROL European Chafer Grubs

2011

Chafer beetle pest of lawns by javed bhat

What control options are available ?

1. CULTURAL CONTROL — Maintaining a healthy lawn is first line of defense against grubs.

Healthy, vigorously growing lawns can tolerate more grub feeding, because they generally have more extensive root system.

Ground-covers can be chosen to be aesthetically pleasing year-round and to require minimal maintenance.

Dutch White Clover (*Trifolium repens*) is one example of a low-growing plant that will form a green, durable ground cover that is easy to maintain. [Wrong !]

Consequences

It also produces tiny white or pale pink flowers that may attract bees and other beneficial insects to your yard.

[Clover also attracts STINGING BEES that are a danger to human health, especially children.]

2. PHYSICAL/BARRIER CONTROLS — Raise your mowing height to 6 to 9 centimetres (2.5 to 3-inches), since beetles prefer laying eggs on closely mowed lawns.

[This method of control is BOGUS and DOES NOT WORK !]

Higher grass height will also help to protect the soil surface from water loss during the summer, and encourage deeper root growth.

3. CHEMICAL CONTROL — Chemical insecticides are also available, however these products are not appropriate for use in the late fall or spring. [!?!]

Before you purchase a chemical insecticide remember that many insecticides are harmful to beneficial insects (such as bees), harmful to aquatic organisms, and have longer-term effects in the soil or ground-water.

[Wrong !]

Chemical treatments should only be considered as a last resort.

[In fact, they should be considered FIRST, since they will CONTROL GRUBS SAFELY AND EFFECTIVELY, often with a single application.]

The healthy lawn care practices, alternative ground-covers, and biological treatments be considered as the preferred approach.

Consequences

Monthly Agriculture Times (continued)

Islamabad, Pakistan

The use of use of Remay cloth, plastic sheeting, or landscape fabric to cover your lawns before dusk (approximately 9 p.m.) in June and July when the adult beetles are most active.

[This is a RIDICULOUS and LABOUR-INTENSIVE method of control that DOES NOT WORK !]

A cover may prevent mated females from laying eggs in your turf and repeating the cycle.

(Note that some covers may need removal each morning.)

4. BIOLOGICAL CONTROL — A recent study commissioned by the **WESTERN CANADA TURFGRASS ASSOCIATION** and the **CANADIAN NURSERY LANDSCAPE ASSOCIATION** (2005), revealed that biological treatments could be very effective at controlling the European chafer population, when used in combination with healthy lawn care practices.
[Wrong !]

According to the study, the most effective biological control measure was the natively-occurring nematode (or microscopic round-worm) *Heterorhabditis bacteriophora*. [Wrong !]

The *H. bacteriophora* nematode is a « cruiser » species that actively infects and kills white grubs, such as the European Chafer grubs.

The 2005 study revealed that *H. bacteriophora*, when used at a rate of up to 3 billion nematodes per acre, can provide significant control of young (1st instar) European chafer grubs in the ground.

[The use of Nematode Insecticide as a so-called method of controlling White Grubs has been DEBUNKED and DISCREDITED. This article from Pakistan is an example of the CONSEQUENCES depraved indifference of Canadian unscrupulous trade associations and business groups.]

LETTER TO THE EDITOR — M TAHIR MAKHDOOM

RESPONSE TO MIS-INFORMATION CONCERNING NEMATODE INSECTICIDE

MONTHLY AGRICULTURE TIMES

ISLAMABAD, PAKISTAN

We wish to provide your readers with a clarification concerning Nematode Insecticide which was featured in an article entitled « *Chafer beetle pest of lawns* » by javed bhat.

Nematode Insecticide IS NOT EFFECTIVE for the control of European Chafer, and the April 2005 report by E.S. Cropconsult Ltd., which was FLAWED and MIS-LEADING, is now DEBUNKED and DISCREDITED.

In Canada, Nematode Insecticide is one of many so-called Green Alternative products that are supposed to REPLACE conventional pest control products.

Unfortunately, they DO NOT WORK and are DISMAL FAILURES.

Consequences

The trade associations that commissioned the 2005 report, Western Canada Turfgrass Association and Canadian Nursery Landscape Association, have taken the UNFATHOMABLE position of supporting BOGUS Green Alternatives and the PROHIBITION of conventional pest control products for their own NEFARIOUS purposes.

Any PROHIBITION of pest control products is NOT JUSTIFIED in Canada because their STRICT REGULATION is BASED ON SCIENTIFIC RESEARCH.
