Update

Iprodione a So-Called Toxic Chemical ???!

In 1986, California voters approved an initiative to address increasing concerns about exposure to so-called toxic chemicals.

That initiative, the Safe Drinking Water and Toxic Enforcement Act of 1986, is better known by its original name of Proposition 65.

Proposition 65 requires businesses to notify Californians about significant amounts of chemicals in the products they purchase, in their homes or work-places, or that are released into the environment.

This list includes iprodione, a contact and/or locally systemic fungicide registered for use on a variety of crops.

Iprodione [a.k.a. Chipco 26019 and Rovral] was first registered with the United States Environmental Protection Agency (EPA) in 1979 as a fungicide.

It is used for a variety of field, fruit and vegetable crops.

These include almonds, grapes, peaches, potatoes, rice, berries, onions, peanuts, lettuce, GOLF COURSE, LAWNS AND ORNAMENTALS.

Handlers of iprodione MAY be exposed to the chemical during and after its use.

Nearby residents MAY also come in contact with the fungicide during its use if it is not applied properly.

People MAY also come into contact with iprodione residues through their diet and drinking contaminated water.

Update

Iprodione a So-Called Toxic Chemical !?!?

According to Joe Frasca, Senior Vice President of Marketing at LA Testing and EMSL Analytical, Inc. —

Due to health concerns [!?!], California placed iprodione on their Proposition 65 list of chemicals back in 1996 due to concerns over its ability to cause cancer. [!?!]

California's agricultural workers, who are involved in growing fruits and vegetables that use this fungicide, or during its use on GOLF COURSE AND ORNAMENTALS, probably have the greatest risk of potential exposures.

Testing the air, soil and water can help minimize worker exposure and help identify situations where environmental contamination may also be a concern.

COINCIDENTALLY, on December 15th, 2011, Bayer CropScience announced it sold ROVRAL to FMC Corp.

Bayer CropScience marketed the product in Canada itself under the brand names ROVRAL WP and ROVRAL GREEN GT, through its Bayer Environmental Science business unit.

ROVRAL GREEN GT is sold as a flowable fungicide for use in TURF to control Brown Patch, Fusarium Patch, Dollar Spot, Leaf Spot, and Pink or Gray Snow Molds.
