## COMMON CHICKWEED

*Stellaria media*

### IDENTIFICATION TIPS

- ▶ This low-spreading, prostrate winter annual succulent features oppositely arranged, small elliptic-shaped leaves, pointed at the tip and stems with rows of hairs. It grows in dense patches, and thrives in moist, shaded areas.
- ▶ It's similar in growth habit and appearance to mouse-ear chickweed (*Cerastium vulgatum*). Common chickweed leaves are less hairy and light green in color; mouse-ear chickweed has dark green or gray-green leaves covered with soft hairs.

### CONTROL TIPS

- ▶ Apply a pre-emergent herbicide containing di-thiopyr or isoxaben prior to germination in fall/winter.
- ▶ For post-emergent control, apply a two-, three- or four-way product that contains an ingredient such as triclopyr, fluroxypyr or clopyralid.
- ▶ For optimum post-emergent control, apply to actively growing, immature weeds in the fall/winter. If a spring application is made, you may need more than one application.

## PARSLEY PIERT

*Alchemilla microcarpa*

### IDENTIFICATION TIPS

- ▶ This low-growing winter annual spreads by seed.
- ▶ Fan-shaped leaves alternate on the stems.
- ▶ The leaves contain three lobes, and each lobe is subdivided again into three to four lobes.
- ▶ The flowers are inconspicuous in the leaf axis.

### CONTROL TIPS

- ▶ Apply a pre-emergent herbicide containing di-thiopyr or simazine prior to germination in fall/winter.
- ▶ This weed can be a major problem on nutrient-deficient lawns or lawns that are mown too closely. Manage with a good fertility program and keep mow height optimum for respective turfgrass.

\* Confront is not for sale or use in Nassau and Suffolk counties, New York. Other state restrictions on the sale and use of Confront apply.

\*\* State restrictions on the sale and use of Dimension apply.
