Growing conditions have been very good for a growing problem in Winnipeg this year.

City boulevards and parks appear to be overrun with dandelions and other weeds.

The city says ideal weather conditions have allowed the weeds to flourish.

It also says the problem will likely get worse down the road now that the province's pesticide ban is in effect.

The city says it's testing an organic spray at a few locations to see if it can be used in the future.

But the new product may never be used city wide as it can cost eight times as much as the chemicals that were used in the past.

To help offset the growing blooms this year, city officials say they're mowing more often.

NORAHG RESPONDS AGAINST THE TESTING OF ORGANIC PESTICIDE-FREE MAINTENANCE IN WINNIPEG, MANITOBA — IT WILL BE A DISMAL FAILURE !

We will save Winnipeg City Council time, energy, and money by stating that PESTICIDE-FREE DOES NOT WORK AND IS A DISMAL FAILURE !. Organic pesticide-free maintenance products & practices are bogus. In fact, no one has ever gotten sick from urban landscapes treated with conventional pest control products, and hence, organic pesticide-free maintenance products & practices are not necessary. Moreover, those cities that have tried so-called organic pesticide-free maintenance products & practices have returned to using conventional products. With organic pesticide-free maintenance products & practices, public and residential green spaces become dangerous and pest-infested garbage dumps. <http://wp.me/P1jq40-44g> <http://wp.me/P1jq40-4z3> <http://wp.me/p1jq40-7C4> Organic pesticide-free maintenance products & practices are unable to provide adequate turf and playing conditions. Moreover, municipalities are not able to afford the high cost of labour needed to manually remove millions of pests, or the stunningly expensive and ineffective green alternative pesticides and organic fertilizers. <http://wp.me/P1jq40-43V> In essence, organic pesticide-free maintenance products & practices are promoted by non-expert activists and consultants with unverifiable success stories ! These products are often owned and distributed by the very same activists and consultants who conspire to impose anti-pesticide prohibition. Organic pesticide-free maintenance products & practices are also promoted by people who falsely allege success, and who are likely concocting lies, misconceptions, and deceptions for their own twisted vested interests. Moreover, companies using organic pesticide-free maintenance products & practices are operated by people who have been caught lying and cheating — they do not speak the truth ! Companies using organic pesticide-free maintenance products & practices simply cannot be successful unless they lie and cheat. They must often resort to illegal green alternative pesticides, such as beet juice, copper sulphate, micro-organisms, and neem oil ... When it suits them ! They also

must resort to conventional pest control products ... when it suits them !
They must resort to conventional pest control products when customers are not present on the property ... when it suits them ! Then, anti-pesticide activists argue that companies using organic pesticide-free maintenance products & practices are, somehow, innovative industry leaders. [?!?!] If they can do it, why can't everybody else ?!?! — in fact, they cannot ! In fact, businesses that promote and use pesticide-free maintenance products & practices are disintegrating under the weight of their own treachery.
<http://wp.me/p1jq40-5x9> Lying, cheating, and fraud are the ONLY ways to appear to succeed with organic pesticide-free maintenance products & practices. Winnipeg City Council must forget about organic pesticide-free maintenance. Only conventional pest control products will safely and effectively control weeds ! More information about the FAILURE OF ORGANIC PESTICIDE-FREE can be found at the following links ...
