1-37532722 - The reporter indicated that she was exposed to an herbicide containing the active ingredient Ferric HEDTA. The reporter stated that her father applied the product one day prior to initial contact with the registrant. The reporter was not aware that the product had been applied; she touched the application site and got some product on her fingers. She washed her hands after the exposure but on the day of initial contact she was experiencing pain in her hand that was spreading up her arm. The reporter was advised that dermal contact may cause transient dermal irritation but the described symptoms are not consistent with exposure to the product. Medical care was recommended to determine an underlying cause and appropriate treatment. No further information is available.

**To be determined by Registrant**
