Conditional Registrations

A pest control product (pesticide) is only registered under the [Pest Control Products Act](#) (PCPA) for use in Canada if Health Canada's Pest Management Regulatory Agency (PMRA) determines through a rigorous scientific evaluation that the health and environmental risks are acceptable when label directions are followed, and that the product has value. Conditional registrations have been granted on occasion when the scientific review determines that the risks of a pesticide are acceptable, but additional information is required to confirm the results of the risk assessment. Registrants are required to compile the additional information within a timeframe specified by PMRA.

The pesticides listed below were granted conditional registration under the [Pest Control Products Regulations](#). A notice of conditions, issued under Section 12 of the PCPA, summarizes the additional information required to fulfill the terms and conditions of the conditional registration, as well as the timeframe for providing the additional information. In some cases, products are granted conditional registration as a result of its association with another conditionally registered product (i.e., related Section 12 Notice).

If you have any questions on pesticide products that have a conditional registration, please contact the [Pest Management Information Service](#).

Note: Health Canada is proposing to discontinue the granting of new conditional registrations, as of 1 June 2016. For more information, please see the consultation document titled [Notice of Intent Regarding Conditional Registrations under the Pest Control Product Regulations](#). Interested parties are encouraged to provide written comments on this proposal by 19 March 2016.

Current Conditional Registrations

Help on accessing alternative formats, such as Portable Document Format (PDF), Microsoft Word and PowerPoint (PPT) files, can be obtained in the [alternate format help section](#).
