Glyphosate Herbicide WILL NOT Cause Cancer – Victory Against Anti-Pesticide Terrorists – Glyphosate Vindicated By US National Cancer Institute – 2017 11 09

November 29, 2017 WILLIAM H GATHERCOLE AND NORAH G t

U.S. National Cancer Institute Finds NO Association Between Glyphosate And Cancer

November 9th, 2017

Reuters, Alberta Farmer, Manitoba Co-Operator, & CBC News

**Re : Research Reported In The Journal Of The National Cancer
Institute (JNCI)**

Selected And Adapted Excerpts

Research Of The U.S. National Cancer Institute (US NCI)

Proof That There Is No Link Between Glyphosate And Cancer

A large long-term research on the use of Glyphosate by agricultural workers in the United States has found NO LINK BETWEEN EXPOSURE TO THE HERBICIDE AND CANCER, scientists said on November 9th, 2017.

Published in the Journal of the National Cancer Institute (JNCI), the research found there was NO ASSOCIATION between Glyphosate and ...

... any solid tumors or lymphoid malignancies overall, including Non-Hodgkin's Lymphoma (NHL) and its sub-types.

The research was part of a large and important project known as the Agricultural Health Study (AHS), which has been tracking the health of tens of thousands of agricultural workers, farmers, and their families in Iowa and North Carolina.

The researchers were led by Ms Laura Beane Freeman, the principal investigator of the Agricultural Health Study (AHS) at the U.S. National Cancer Institute.

Since the early 1990s, these researchers have gathered and analyzed detailed information on the health of participants and their families, and their use of pest control products, including Glyphosate.

The research indicated that among 54,251 (pesticide) applicators, 44,932, or 82.9 per cent, had used Glyphosate.

The researchers concluded that —

Glyphosate was NOT statistically significantly associated with cancer at any site.

Mr David Spiegelhalter, a professor of the Public Understanding of Risk at Britain's Cambridge University, who has NO link to the research, said the research was based upon a ...

... large and careful study ...

... [and showed] NO significant relationship between Glyphosate use and any cancer.

Glyphosate Herbicide And The Subversive Conspiracy To Impose Reckless
And Arbitrary Prohibition Against This Safe And Effective Weed Control Product

There Is No Evidence That Glyphosate Causes Cancer Or Any Health Problems

FORCE OF NATURE | DARING TO DEFY BY EXPLORING THE WHOLE TRUTH FROM AN INDEPENDENT PERSPECTIVE
National Organization Responding Against HUIJE that conspire to destroy the Green Space and other industries (NORAHG)

Research Of The U.S. National Cancer Institute (US NCI)

Impacts Of Proof That Glyphosate Does Not Cause Cancer

LEGAL IMPACT IN THE UNITED STATES

The research of the US National Cancer Institute is likely to have LEGAL IMPACT on proceedings taking place in the United States against Monsanto, in which more than 180 plaintiffs are claiming exposure to Roundup gave them cancer — allegations that are DENIED by Monsanto.

POLITICAL IMPACT IN THE EUROPEAN UNION

The research of the US National Cancer Institute may also have a POLITICAL IMPACT in the European Union [EU].

A crucial decision is expected by the end of 2017 on the issue of Glyphosate being re-licensed for sale across the European Union [EU].

Nations of the European Union had been expected to vote on the issue on November 9th, 2017, but again failed to agree to a proposal for a five-year extension.

Glyphosate Herbicide And The Subversive Conspiracy To Impose Reckless
And Arbitrary Prohibition Against This Safe And Effective Weed Control Product

**IARC Is
NOT
To Be Trusted**

FORCE OF NATURE | DARING TO DEFEY BY EXPLORING THE WHOLE TRUTH FROM AN INDEPENDENT PERSPECTIVE
National Organization Responding Against HUIE that conspire to destroy the Green Space and other industries (NORAHG)

Research Of The U.S. National Cancer Institute (US NCI)

Proof About Glyphosate Has Debunked IARC

The European Union's decision has been delayed for several years after the World Health Organization's International Agency for Research on Cancer (IARC) reviewed Glyphosate in 2015.

IARC [**falsely**] concluded that it was « *probably carcinogenic* » to humans. [**?!?!**]

Reuters reported in June 2017 how an influential scientist was aware of new Agricultural Health Study (AHS) data while he was chairing a panel of experts reviewing evidence on Glyphosate for IARC in early 2015.

But, since it had not, at that time, been published, he did not tell the expert panel about it, and IARC's review DID NOT TAKE IT INTO ACCOUNT.

The publishing of the research report by National Cancer Institute (NCI), comes more than four years since drafts based on the Agricultural Health Study (AHS) data on Glyphosate and other pest control products were circulating in February and March 2013.

Regulatory agencies, such as the European Food Safety Authority, have DISCREDITED the IARC, and have already concluded that Glyphosate is SAFE TO USE.

GLYPHOSATE EXPERT PANEL OF SCIENTISTS AND EUROPEAN FOOD SAFETY AUTHORITY HAVE ALSO DISCREDITED IARC !

The assessments from both the 2015 Glyphosate Expert Panel Of Scientists and the European Food Safety Authority (EFSA) have said Glyphosate is NOT likely to be carcinogenic. Both organizations DISCREDITED a hazard report from International Agency for Research on Cancer (IARC). On March 20th, 2015, the IARC's study arbitrarily classified the herbicide Glyphosate, the active ingredient in Roundup, as PROBABLY carcinogenic on the basis of LIMITED EVIDENCE. IARC's use of the term LIMITED EVIDENCE clearly implied that its study was SEVERELY FLAWED, DISTORTED,

and UNBALANCED. Here is a summary of the findings of the 2015 Glyphosate Expert Panel Of Scientists — • Glyphosate DOES NOT cause cancer in lab rats • Glyphosate is NOT genotoxic • studies DO NOT show a link between Glyphosate exposure and cancer. The European Food Safety Authority (EFSA) functions as an advisor to policy-makers in the European Union (EU). The EFSA's assessment on Glyphosate was expected to lead the European Union to RENEW approval for Glyphosate.

The whole truth about the PANEL and EFSA can be found by exploring the following link ...

<http://pesticidetruths.com/2016/01/08/glyphosate-herbicide-will-not-cause-cancer-the-2015-glyphosate-expert-panel-of-scientists-european-food-safety-authority-efsa-2015-12-08-2/>

Research Of The U.S. National Cancer Institute (US NCI)

Proof About Glyphosate Lauded By Monsanto

The publication of the research by the National Cancer Institute (NCI) on November 9th, 2017, comes more than four years since drafts based on the Agricultural Health Study (AHS) data on Glyphosate and other pest control products were circulating in February and March 2013.

Mr Scott Partridge, Monsanto's Vice President of Strategy, said the research results clearly showed that the herbicide was safe.

According to the research report —

Glyphosate was NOT statistically significantly associated with cancer at any site.

According to Mr Scott Partridge of Monsanto —

This is the largest study of agricultural workers in history, over the longest period of time.

It is the gold standard, ... and it definitively demonstrates in a real-world environment that Glyphosate DOESN'T cause cancer.

Research Of The U.S. National Cancer Institute (US NCI)

Acute Myeloid Leukemia (AML) ?!?!

The research of the US National Cancer Institute was the first to report a POSSIBLE ASSOCIATION between Glyphosate and Acute Myeloid Leukemia (AML).

But that this could be the result of chance, and should be treated with caution.

The research indicated that there was some evidence of increased risk of Acute Myeloid Leukemia (AML) among the highest exposed group, [**but added this association was not**] statistically significant [**and would require more research to be confirmed**].

Mr David Spiegelhalter, a professor of the Public Understanding of Risk at Britain's Cambridge University stated that the possible association with Acute Myeloid Leukemia (AML) was NOT a concern, and ...

... is NO more than one would expect by chance.

Research Of The U.S. National Cancer Institute (US NCI)

Background Information

✓ **FACTS** About Glyphosate

✓ **FACT** — Glyphosate Is Scientifically-Safe & Will Cause No Harm

National regulatory agencies & leading experts have been siding with the overwhelming scientific evidence demonstrating that Glyphosate will NOT cause cancer — there is neither bio-medical nor epidemiological evidence to support the claim that Glyphosate causes cancer

✓ **FACT** — Glyphosate Will Not Cause Cancer

✓ **FACT** — Glyphosate Is So Safe, You Can Drink A Glass Of It ?!?!?

✓ **FACT** — The Unfounded Chemophobic Assault Against Science Has Been Neutralized

✓ **FACT** — The False-Accusations Of Cancer By International Agency For Research On Cancer (IARC) Have Been Scientifically Proven As Wrong

✓ **FACT** — The Pesticide-Hating IARC Has Been Discredited

✓ **FACT** — The Lies & The False Allegations By Anti-Pesticide & Environmental-Terrxrists Masquerading As Health Experts Have Been Refuted

✓ **FACT** — Glyphosate Has Been Vindicated Around The World

Glyphosate will NOT cause cancer, according to leading scientific experts at national regulatory agencies in Australia, European Union, Genotoxic Expert Panel Review, New Zealand, Nova Scotia, Switzerland, United Nations, & United States (America)

✓ **FACT** — Glyphosate Has Been Vindicated By America

The United States has declared that the US Environmental Protection Agency (US EPA) has given Glyphosate its safest possible classification

✓ **FACT** — Glyphosate Has Been Vindicated By Canada

Health Canada has found that Glyphosate DOES NOT present risks of concern to human health or the environment when used according to label directions

✓ **FACT** — Glyphosate Has Been Vindicated By Australia

Australian concerns about the effect of Glyphosate on health have been totally REFUTED, with the government concluding that Glyphosate DOES NOT pose a cancer risk to humans

✓ **FACT** — Glyphosate Has Been Vindicated By The European Union

Europeans have been rejecting Greenpeace's fear-mongering, & are indicating that the jig is up — the political tide, boosted by evidence, is starting to turn in FAVOUR of Glyphosate

✓ **FACT** — Glyphosate Has Been Vindicated By The Genotoxic Expert Panel Review

The Genotoxic Expert Panel Review has REFUTED the idea that Glyphosate causes cancer — this group of 16 leading scientific experts, from Canada, the United States, Denmark, Brazil, the United Kingdom, & other countries, has decisively concluded that Glyphosate is UNLIKELY to pose a carcinogenic risk to humans — the Genotoxic Expert Panel Review DISAGREED with the conclusion of the International Agency for Research on Cancer (IARC) that there is SUFFICIENT EVIDENCE that Glyphosate is carcinogenic for lab animals such as mice & rats

✓ **FACT** — Glyphosate Has Been Vindicated By New Zealand

New Zealand has rebuked the International Agency for Research on Cancer (IARC) by announcing that it found NO Glyphosate-cancer link — furthermore, the government has stated that Glyphosate is UNLIKELY to be carcinogenic & should NOT be classified as a mutagen or carcinogen

✓ **FACT** — Glyphosate Has Been Vindicated By Nova Scotia

In the Province of Nova Scotia, the Chief Public Health Office has issued a statement saying that there is NO EVIDENCE that Glyphosate creates a risk to human health if used properly — even water can be toxic if too much is consumed in a short period of time

✓ **FACT** — Glyphosate Has Been Vindicated By Switzerland

Another victory for evidence-based science has been won in Switzerland, where the government has stated that there was insufficient scientific evidence to justify a ban on the general use of Glyphosate, especially for farming

✓ **FACT** — **Glyphosate Has Been Vindicated By The United Nations**

The World Health Organization (WHO) & the Food & Agriculture Organization (FAO), both agencies of the United Nations, have stated that Glyphosate is UNLIKELY to pose a carcinogenic risk to humans

Glyphosate Vindicated

Roundup

**Glyphosate Is Scientifically-Safe
& Will Cause No Harm**

SUMMARY

Roundup branded herbicides are some of the most effective methods that farmers use to control weeds.

But is Roundup — and its main active ingredient Glyphosate — safe ?!?!

How does it really work ?!?!

Give it a minute.

MORE DETAILS

Targeted, Effective, & Proven

Whether you battled weeds at your home or in your fields Roundup a branded herbicides are some of the most effective methods for controlling them.

But what about the main active ingredient Glyphosate ?!?!

Is it harmful ?!?!

How does it work ?!?!

Give it a minute ?!?!

Glyphosate-based products were introduced in the seventies and became popular with farmers for the wide variety of weeds they helped control and their history of safe use.

In fact, in addition to the US EPA, regulatory agencies in more than one hundred and sixty countries have approved Glyphosate-based products.

Here's how it works.

Glyphosate is applied to weeds — once absorbed it travels to the roots where it blocks a specific enzyme found in plants — NOT animals or humans.

Without that enzyme, the weed can't make the building blocks that it needs to grow, the entire weed withers to the ground.

Any remaining Glyphosate is broken down in the soil into naturally-occurring substances like carbon dioxide and phosphate.

To further target only weeds, certain crops have been specifically modified so that Glyphosate doesn't affect them.

This means farmers don't have to turn over their soil as much to control weeds, which reduces emissions.

It also reduces soil erosion, in some cases, by as much as 90 per cent.

Targeted, effective, and proven — all reasons Glyphosate is the most widely-used weed control product in the world today.

That's a lot to cover in a minute, so if you still have questions check out discovered.monsanto.com

Glyphosate Vindicated

America

**Glyphosate Has Been Vindicated
By The United States**

SUMMARY

The United States has declared that the US Environmental Protection Agency (US EPA) has given Glyphosate its SAFEST possible classification.

MORE DETAILS

The United States has declared that the US Environmental Protection Agency (US EPA) has given Glyphosate its SAFEST possible classification.

In September 2016, the US Environmental Protection Agency made the following declaration —

The EPA Gave Glyphosate Its Safest Possible Classification

The US EPA has successfully separating a health scare from a health threat.

On September 12th, 2016, the US EPA reported that Glyphosate DOES NOT cause cancer.

According to the US EPA, « *the available data at this time DO NOT SUPPORT a carcinogenic process for Glyphosate* ».

The US EPA's assessment of Glyphosate was based upon an extensive data-base exists for evaluating the carcinogenic potential of Glyphosate, including 23 epidemiological studies, 15 animal carcinogenicity studies, and nearly 90 genotoxicity studies for the active ingredient Glyphosate.

On April 29th, 2016, the US EPA had also classified Glyphosate as « *NOT likely to be carcinogenic to humans* », the SAFEST classification on the scale.

The US EPA's assessment of Glyphosate discredited the anti-Glyphosate report by International Agency for Research on Cancer (IARC) which conveniently disregarded several studies on the effects of exposure to Glyphosate purely on the basis that these studies showed NO positive results.

The US EPA report also noted that the studies IARC chose to include in its report had significant limitations.

Additionally, IARC's anti-Glyphosate report was based on a review of the scientific literature that was NOT comprehensive.

IARC deliberately overstated the risks with its arbitrary and selective « *cherry picking* » studies against Glyphosate.

NO pesticide regulator in the world considers Glyphosate to be a carcinogen, and both US EPA reports once again reinforce this important fact.

The US EPA is successfully separating a health scare from an actual health threat.

Glyphosate Vindicated

Canada

Glyphosate Has Been Vindicated By Canada

SUMMARY

Health Canada has found that Glyphosate DOES NOT present risks of concern to human health or the environment when used according to label directions.

MORE DETAILS

Health Canada has found that Glyphosate DOES NOT present risks of concern to human health or the environment when used according to label directions.

As of 2017, Health Canada is granting continued registration of products containing Glyphosate for sale and use in Canada.

The evidence in FAVOUR of Glyphosate is overwhelming.

Products containing Glyphosate are UNLIKELY to affect your health.

Dietary risks from food and water are NOT of concern.

Non-occupational risks are NOT of concern.

Non-occupational risks from by-stander dermal exposure are NOT of concern.

Glyphosate products are NOT expected to pose risks of concern to the environment.

Overall, there are currently NO environmental incident reports involving Glyphosate in Canada.

Health Canada, as well as all other national regulatory agencies world-wide, have vindicated Glyphosate.

These agencies include those within the European Union, the United States, and the United Nations.

Glyphosate Vindicated

Australia

**Glyphosate Has Been
Vindicated By Australia**

SUMMARY

Australian concerns about the effect of Glyphosate on health have been totally REFUTED, with the government concluding that Glyphosate DOES NOT pose a cancer risk to humans.

MORE DETAILS

Australian concerns about the effect of Glyphosate on health have been totally REFUTED, with the government concluding that Glyphosate DOES NOT pose a cancer risk to humans.

On October 4th, 2016, the Australian Pesticides and Veterinary Medicines Authority (APVMA) published its assessment of the IARC report and other recent assessments against Glyphosate.

APVMA has concluded that ...

Glyphosate Does Not Pose A Cancer Risk To Humans

Concerns have been raised about human exposure to the common herbicide Glyphosate, following a flawed assessment by International Agency for Research on Cancer (IARC) which had classified Glyphosate in a group of chemicals that is « *probably carcinogenic to humans* ». [?!?!]

The IARC concerns have been totally REFUTED in Australia.

Glyphosate is a broad-spectrum herbicide which works by inhibiting an enzyme found in plants.

There are around 500 products containing Glyphosate registered for use in Australia.

Glyphosate has been registered for use in Australia for over 40 years.

REPORT – GLYPHOSATE & AUSTRALIA

Glyphosate Vindicated

European Union (EU)

Glyphosate Has Been Vindicated By The European Union

SUMMARY

Europeans have been rejecting Greenpeace's fear-mongering, and are indicating that the jig is up — the political tide, boosted by evidence, is starting to turn in FAVOUR of Glyphosate.

MORE DETAILS

Europe is notoriously averse to modern food technology.

So when Europeans, who have gone so far as to enshrine the precautionary principle into EU law, are rejecting Greenpeace's fear-mongering, it indicates that the jig is up.

The political tide, boosted by evidence, is starting to turn in FAVOUR of Glyphosate.

The effect of Glyphosate on health is a MYTH.

On June 28th, 2016, the European Union announced its approval for Glyphosate.

After months of lobbying and member state indecision, the European Union replaced a previous proposal to renew the licence for Glyphosate for up to 15 years with a suggested 12- to 18-month extension pending further scientific study.

Glyphosate Vindicated

Genotoxic Expert Panel Review

Glyphosate Has Been Vindicated By The Genotoxic Expert Panel Review

SUMMARY

The Genotoxic Expert Panel Review has REFUTED the idea that Glyphosate causes cancer — this group of 16 leading scientific experts, from Canada, the United States, Denmark, Brazil, the United Kingdom, and other countries, has decisively concluded that Glyphosate is UNLIKELY to pose a carcinogenic risk to humans.

The Genotoxic Expert Panel Review DISAGREED with the conclusion of the International Agency for Research on Cancer (IARC) that there is sufficient evidence that Glyphosate is carcinogenic for lab animals such as mice and rates.

MORE DETAILS

Yet another study has REFUTED the idea that Glyphosate causes cancer.

In a paper published on-line in critical reviews in toxicology, four independent panels of experts, named the Genotoxic Expert Panel Review, looked at the relevant research on Glyphosate and whether it is carcinogenic.

The group of 16 scientists, from Canada, the United States, Denmark, Brazil, the United Kingdom, and other countries, decisively concluded that ...

Glyphosate Is Unlikely To Pose A Carcinogenic Risk To Humans

The Genotoxic Expert Panel Review bluntly rejected the findings of the International Agency for Research on Cancer (IARC), which decided in march 2015 that Glyphosate is probably carcinogenic to humans. [?!?!]

According the exposure experts of the Genotoxic Expert Panel Review — « *Even when using worst-case assumptions, systemic exposures to applicators, by-standers, and the general public are VERY SMALL ... there is an EXTREMELY LARGE MARGIN OF SAFETY from exposure to Glyphosate via normal uses* ».

According the Epidemiology Panel of the Genotoxic Expert Panel Review — « *Glyphosate epidemiologic literature DOES NOT indicate a causal relationship between Glyphosate exposure and NHL (non-Hodgkin's lymphoma)* ».

According the leading experts of the Genotoxic Expert Panel Review — « *Extensive reviews of the genotoxicity ... all SUPPORT a conclusion that Glyphosate is inherently NOT genotoxic* ».

The Genotoxic Expert Panel Review DISAGREED with the IARC conclusion that there is sufficient evidence that Glyphosate is carcinogenic for lab animals such as mice and rates.

The conclusions of the 16 member Genotoxic Expert Panel Review SUPPORT the findings of agencies around the world.

Health Canada, the European Food Safety Authority and a joint WHO and United Nations Food and Agriculture Panel published similar scientific reviews in 2015 and 2016.

All of the organizations reported that Glyphosate is NOT carcinogenic for humans.

Glyphosate Vindicated

New Zealand

**Glyphosate Has Been
Vindicated By New Zealand**

SUMMARY

New Zealand has rebuked the International Agency for Research on Cancer (IARC) by announcing that it found NO Glyphosate-cancer link — furthermore, the government has stated that Glyphosate is UNLIKELY to be carcinogenic and should NOT be classified as a mutagen or carcinogen.

MORE DETAILS

In August 2016, the Environmental Protection Agency in New Zealand (NZ EPA) announced that it found ...

No Glyphosate-Cancer Link

New Zealand is REBUKING the International Agency for Research on Cancer (IARC).

The New Zealand Glyphosate Review, commissioned by New Zealand's Environmental Protection Authority, says the broad-spectrum herbicide is ...

Unlikely To Be Carcinogenic & Should Not Be Classified As A Mutagen Or Carcinogen

From the Executive Summary of the New Zealand Glyphosate Review —

The majority of human studies DID NOT show an association between exposure to Glyphosate and cancer.

Although a SMALL NUMBER of studies with a limited number of participants [used by WHO's IARC committee in its decision that Glyphosate was « probably carcinogenic to humans »] found a weak association between Glyphosate exposure and increased risk of non-Hodgkin lymphoma (NHL), others DID NOT.

The studies that found NO association between Glyphosate exposure and NHL included the largest and most reliable, which included over 50,000 participants.

Based on the inconsistency in the results of the studies on Glyphosate exposure and NHL, and the lack of any association in the largest, most robust study, it was concluded that there is NO CONVINCING EVIDENCE of an association between Glyphosate exposure and the development of cancer in humans.

The New Zealand Glyphosate Review takes into account studies reviewed by ...

- European Food Safety Authority (EFSA)

- FAO/WHO Joint Meeting on Pesticide Residues (JMPR)
- International Agency for Research on Cancer (IARC)
- US Environmental Protection Agency (US EPA)

Glyphosate Vindicated

Nova Scotia

**Glyphosate Has Been
Vindicated By Nova Scotia**

SUMMARY

In the Province of Nova Scotia, the Chief Public Health Office has issued a statement saying that there is NO EVIDENCE that Glyphosate creates a risk to human health if

used properly — even water can be toxic if too much is consumed in a short period of time.

MORE DETAILS

In the Province of Nova Scotia, Chief Public Health Officer, Dr Robert Strang, is firing back over health concerns surrounding the province's approval for the application of Glyphosate.

In August 2016, Nova Scotia Environment gave the green light to Northern Pulp, and three other companies, to spray more than 2,600 hectares of woodland in Colchester, Cumberland, Hants and Pictou counties with VisionMax, which contains Glyphosate.

On September 2nd, 2016, Dr Strang issued a statement saying that ...

**There Is No Evidence That Glyphosate Creates
A Risk To Human Health If Used Properly**

**Even Water Can Be Toxic If Too Much Is
Consumed In A Short Period Of Time**

Dr Strang said although the World Health Organization has identified Glyphosate as a probable human carcinogen under certain conditions [?!?!], Health Canada has ruled that Glyphosate is NOT a health risk to humans so long as it is properly applied.

According to Dr Strang —

To determine the actual risk you have to ask exactly how is the chemical going to be used — when, how, where, and how much — and work all that through in a risk assessment to say what's the possible human exposure and what are the health risks from that exposure.

All the evidence would say that the way it is proposed to be used in Nova Scotia for forestry application DOES NOT pose any human health risk.

Dr Strang went on to cite a recent New Brunswick study with similar findings, and said it's about weighing risks and benefits.

In 2011, Glyphosate was one of a number of ingredients whose use was arbitrarily prohibited in the Urban Landscape by the Government of Nova Scotia.

SPRAY DOESN'T POSE ANY HUMAN HEALTH RISK ([Reference](#))

Glyphosate Vindicated

Switzerland

Glyphosate Has Been Vindicated By Switzerland

SUMMARY

Another victory for evidence-based science has been won in Switzerland, where the government has stated that there was **INSUFFICIENT SCIENTIFIC EVIDENCE** to justify a ban on the general use of Glyphosate, especially for farming.

MORE DETAILS

Now, another victory for evidence-based science has been won, this time in Switzerland.

According to Swissinfo, a news site based in Switzerland —

The House of Representatives has rejected a petition from various [anti-pesticide & environmental-terror~~x~~rist] organizations such as Greenpeace and the Consumers' Association for French-speaking Switzerland, which have been calling for a ban on the use of all synthetic chemical pesticides, such as the weed-killer ingredient Glyphosate.

*A majority of parliamentarians said [on September 30th, 2016] there was **INSUFFICIENT SCIENTIFIC EVIDENCE** to justify a ban on the general use of Glyphosate, especially for farming.*

In November 2017, the Federal Council, Switzerland's executive, rejected the Green Party's proposal to prohibit the use of Glyphosate.

The Federal Council believes that Glyphosate residues in Switzerland are low and harmless to health.

It sees NO reason to prohibit its use.

Glyphosate Vindicated

United Nations

**Glyphosate Has Been Vindicated
By The United Nations**

SUMMARY

The World Health Organization (WHO) & the Food & Agriculture Organization (FAO), both agencies of the United Nations, have stated that Glyphosate is UNLIKELY to pose a carcinogenic risk to humans.

MORE DETAILS

On May 16th, 2016, the World Health Organization (WHO) and the Food and Agriculture Organization (FAO), both agencies of the United Nations, stated that ...

Glyphosate Is Unlikely To Pose A Carcinogenic Risk To Humans

The United Nations announced its assessment that Glyphosate is UNLIKELY to cause cancer in people, and that it is UNLIKELY to pose a carcinogenic risk to humans exposed to it through food !

The United Nations' Food and Agriculture Organization (FAO) and World Health Organization (WHO) looked at all pertinent published and unpublished studies to assess the health risk to consumers from dietary exposure to Glyphosate residues in food.

Glyphosate

Drink Test

**Glyphosate Is So Safe, You
Can Drink A Glass Of It !?!**

MORE DETAILS

Of course, this will change few opinions among the true believers.

Monsanto-haters and GMO-Phobes are implacable.

We can already hear their objections —

If Glyphosate is so safe, why don't you drink a glass of it !?!

That's absurd.

Organic farmers use manure to fertilize crops.

Perhaps they should DRINK a glass of that.

Nonetheless, any drink test is a ridiculously worthless stunt.

You could no more drink a glass of diluted pest control product than you could a glass of water filled with common table salt.

Both will upset your stomach, and only an idiot would consider drinking either of them.

According to Dr Keith R Solomon —

These materials [pest control products used in the urban landscape] are less toxic than table salt.

I'm NOT suggesting you use them [pest control products] on your fish and chips, but just to put it into some sort of perspective.

Dr Keith Ross Solomon is a Doctorate-Level Expert and World Leading Scientific Expert in the Field of Environmental Biology, Toxicology, and Pesticide Safety.

He is also Professor in the Department of Environmental Biology at the University of Guelph, Ontario, as well as Director of the Centre for Toxicology in Guelph, Ontario. <http://wp.me/P1jq40-1Lk>

Pest control products, like 2,4-D and Glyphosate, are NO MORE HARMFUL than table salt, and, in fact, 2,4-D tastes like salt water.

In the early 1940s, Dr R Milton Carleton was the co-developer of another ingredient that is just as safe as Glyphosate, 2,4-D herbicide.

Dr Carleton usually carried a flask around with him that contained 2,4-D from which he would drink on request « *just to prove it was harmless* ».

Anyone who knew the distinctive fish smell of 2,4-D knew that Dr Carleton was actually drinking the real stuff.

2,4-D and Glyphosate are less toxic than Aspirin, baking soda, caffeine, cannabis, nicotine, table salt, and Tylenol.

2,4-D and Glyphosate are NO MORE TOXIC than ethanol (an edible beverage constituent in beer, wine, and other intoxicating beverages), mouthwash (Listerine), and Vitamin C.

Pest control products like 2,4-D and Glyphosate are scientifically-safe, practically non-toxic, will cause NO harm, will NOT cause cancer, and will NOT cause irreversible damage if consumed orally.

The probable lethal dose for a person ingesting the concentrated form of 2,4-D or Glyphosate is one litre, the volume of an entire milk carton.

By comparison, drinking six litres of water, which is considered harmless, can lead to water poisoning or dilutional hyponatremia, which is a potentially fatal disturbance in brain functions.

In essence, water is only five times safer than 2,4-D or Glyphosate.

Dr Carleton was NOT harmed by drinking 2,4-D — he lived to the age of 87.

GLYPHOSATE — Left-Wing Pesticide-Hating Fanatic Drinks Roundup At Public Meeting — Washoe, Nevada — Video Recording — 1 Min 25 Sec (**Reference**)

WE SPEAK THE WHOLE TRUTH ABOUT GLYPHOSATE FROM AN INDEPENDENT PERSPECTIVE !

We are the National Organization Responding Against HUJE that conspire to destroy the Green space and other industries (NORAHG). As a non-profit and independent organization, we are environmentalists who are dedicated to reporting about truth-challenged pesticide-hating fanatxcs (HUJE) who conspire to destroy businesses that are dependent on the use of safe and effective conventional pest control products. We also report on the work of several highly-rated leading experts who have recognized expertise, training, and background in matters concerning pest control products, and who promote environmental realism and pesticide truths.

Not surprisingly, enviro-fanatџcs have demonstrated that they are incapable of processing overwhelming scientific evidence. Should we trust these fanatџcs, who conveniently ignore scientific evidence, and attempt to impose their politicized-doctrines and twisted life-style choices against our society ?!?!

NORAHG was the brain-child of Mr William H Gathercole and his colleagues in 1991. Mr Gathercole is now retired, although his name continues to appear as founder. We dare to defy the pesticide-hating fanatџcs by exploring the whole truth from an independent perspective on The Pesticide Truths Web-Site ... <http://pesticidetruths.com/> If you wish to receive free reports on issues that concern you, please contact us at ... force.of.de.nature@gmail.com WILLIAM H GATHERCOLE AND NORAH G
