EPA-HQ-OPP-2009-0361

Subject: Summary of March 30, 2015 Meeting Between EPA and Monsanto Company

On March 30th, 2015, at the request of Monsanto, members of EPA's glyphosate registration review team met with representatives from Monsanto to discuss the registration review timeline and human health risk assessment for glyphosate. Discussion during the first part of the meeting focused on the publication of the preliminary risk assessments for registration review and Monsanto's weed resistance management proposal as well as Monsanto's monarch conversation effort. During the latter part of the meeting Monsanto presented an analytical method that they will use for testing residues of glyphosate in human breast milk, for which the agency provided comments. The agency is currently conducting its own analysis of residues of glyphosate in human breast milk, which will publish at the time of the preliminary risk assessments. The preliminary risk assessments and EPA's weed resistance management document are expected to publish later in 2015. Registration review information for glyphosate can be found in docket EPA-HQ-OPP-2009-0361 at www.regulations.gov.
