Customer Questions & Answers for
No Nema Globe Grub Busters Nematodes

Nematodes are a naturally occurring, earth friendly microscopic worm. Efficient mix of heterorhabditis bacteriophora and steinernema carpocapsae for control of major turf and garden pests. Safely attack root eating grubs in the larval stage to protect your garden. Nematodes seek out white grubs, citrus root weevil, Japanese beetles, May/June beetles, European/Masked chafer, black vine weevil and sod webworm

QUESTIONS & ANSWERS FOR NO NEMA GLOBE GRUB BUSTERS NEMATODES

Choose a sort order ▾

QUESTION	ANSWERS	2 ANSWERS
How do I know I applied properly? I follow the instruction using the grub buster sprayer. But the problem I have is that the mixture in the sprayer is not diminishing a bit after 10 mins of spray. Is that mean the mixture is not get into the lawn? asked 1 month, 1 week ago by Anonymous on Nema Globe Grub Busters Nematodes	answer 1 I had the same problem , you need to strain the mixture through a kitchen sieve to get the lumps out, the lumps will block the tube in the sprayer and not allow it to syphon the mixture. answered 4 days ago by bobbyo	
How long can I keep the mixture (earth friendly microscopic worm and water) in the fridge? I mixed the package with water inside the grub buster sprayer but it seems that the sprayer is not working properly. I need to save the mixture until I know how to use the sprayer properly or I need a new sprayer. asked 1 month, 1 week ago by whoknowsitworksornot on Nema Globe Grub Busters Nematodes	answer 2 When you were spraying, the mixture naturally went down into the lawn and not up into the sky. This would reassure me of course that the grass treatment went according to plan. answered 1 month ago by Anonymous	

QUESTION	ANSWERS	1 ANSWER
Confirmation of nematode species. The product write up on the CT site indicates heterorhabditis bacteriophora and steinernema carpocapsae nematode species are available within this product, however the packaging material indicates: Steinernema glaseri species? asked 2 months, 3 weeks ago by CanadianBug on Nema Globe Grub Busters Nematodes	answer 1 It is only the latter type of nematode, must be incorrect on the CT site somehow. answered 1 month, 2 weeks ago by Anonymous	

QUESTION	ANSWERS	1 ANSWER
What is the coverage? Package shows conflicting information.	answer 1 The correct coverage is 275 square meters or close to 3,000 square feet.

Recent Question:

can I spray under my home to stop bugs from coming up
([see more details](#))

Asked on: CIL Tomahawk® Crawling Insect Spray

275 square meters = 2960 square feet yet package (albeit blurred at bit) looks like just 1200 sq ft.
