

Pest control on crops is UNLIKELY to cause so-called Bee Colony Collapse Disorder.

Research now shows that the effects of insecticide are NOT AS SEVERE AS FIRST THOUGHT.

Scientists from the University of Exeter and Food and Environment Agency highlight FLAWS in PREVIOUS RESEARCH (published in the journal Science, April 2012) that predicted that neonicotinoid insecticides could cause so-called Bee Colony Collapse Disorder.

Researchers know that neonicotinoids affect honey bees, but there is NO EVI-DENCE that they could cause so-called Bee Colony Collapse Disorder.

Pesticides Not Yet **Proven Guilty** Of Causing Honey Bee Declines

Selected and Adapted Excerpts

The University of Exeter is a public research university located in South West 90 per cent of Exeter's research was rated as being at internationally recognised levels. 17 per cent of the submitted research was rated 4 (« world-leading »). 16 of the 31 subjects evaluated were ranked in the top 10, with 27 in the top 20.

Pesticides Not Yet Proven Guilty of Causing Honey Bee Declines

According to a paper in the journal Science ...

The impact of crop pesticides on honey bee colonies is UNLIKELY to cause colony collapse.

More research is now needed to predict the impact of widely-used agricultural insecticides, called neonicotinoids, on honey bee populations.

Scientists from the University of Exeter and Food and Environment Agency highlight FLAWS in PREVIOUS RESEARCH (published in Science, April 2012) that predicted that neonicotinoids could cause Bee Colony Collapse Disorder.

Neonicotinoids are among the most widely-used agricultural insecticides and honey bees ingest residues of the pesticides as they gather nectar and pollen from treated plants.

The previous research has been cited by scientists, environmentalists, and policy-makers as so-called evidence of the future impact of these pesticides on honey bees.

It is likely that the research was instrumental in the French government's recent decision to ban the use of thiamethoxam, a neonicotinoid that is the active ingredient of Cruiser OSR, a pest control product produced by the Swiss company Syngenta.

However, the new paper argues that the calculations made in PREVIOUS RE-SEARCH were FLAWED because they failed to reflect the rate at which honey bee colonies recover from losing individuals.

The PREVIOUS RESEARCH, led by French scientist Mikaël Henry, showed that the death rate of bees increased when they drank nectar laced with a neonicotinoid pesticide, thiamethoxam.

PREVIOUS RESEARCH calculated that this would cause their colony to col-

The research published today explains how the calculation may have used an INAPPROPRIATELY LOW BIRTH RATE.

Pesticides Not Yet Proven Guilty of Causing Honey Bee Declines

Lead author Dr. James Cresswell of Biosciences at the University of Exeter

We know that neonicotinoids affect honey bees, but there is NO EVI-**DENCE** that they could cause colony collapse.

When we repeated the previous calculation with a realistic birth rate, the risk of colony collapse under pesticide exposure disappeared.

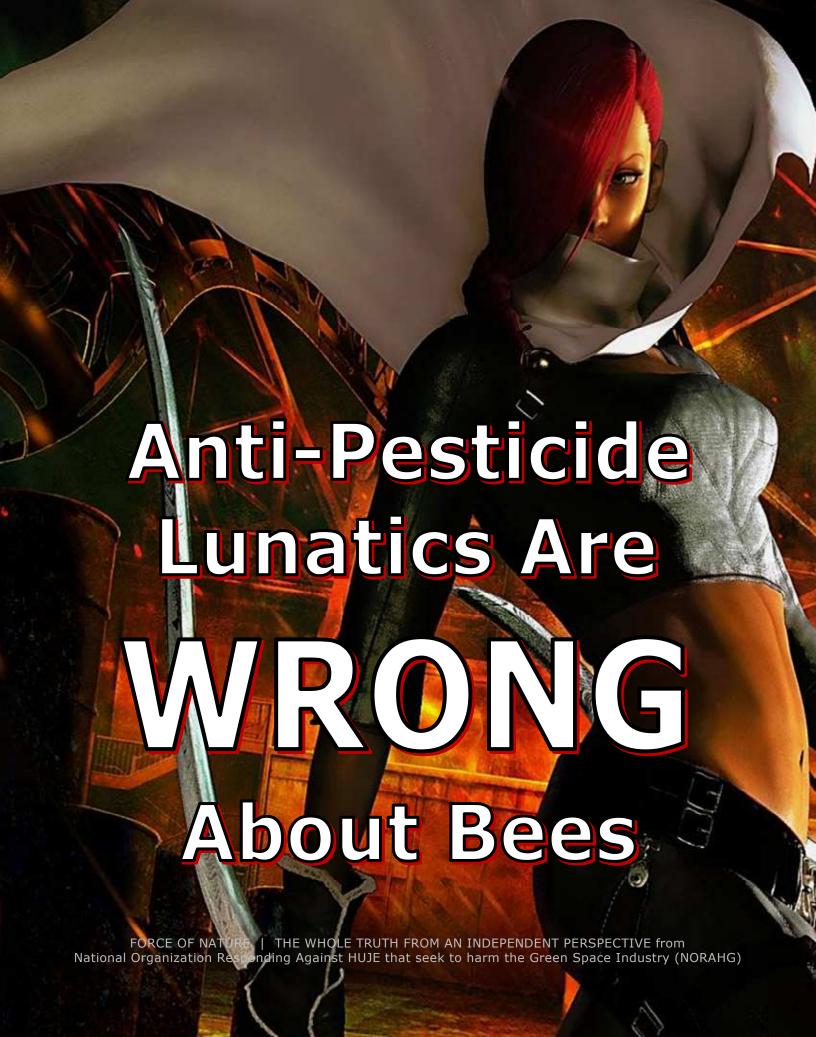

I am definitely not saying that pest control products are harmless to honey bees, but I think everyone wants to make decisions based on

sound evidence - and our research shows that the ef-NOT AS SEVERE AS FIRST THOUGHT.

We do not yet have definitive evidence of the impact of these insecticides on honey bees, and we should not be changes to policy on their

It is vital that more research is conducted so that we can understand the real impact of neonicotinoids on honey bees, so governments can put tothat the chemicals pose.

Exposing Misconceptions About the Imaginary Threat of Pest Control Products

Agriculture Protects Pollinators

POLLINATORS in Canada, such as HONEY BEES and WILD BEES, pollinate many fruits, vegetables, field crops such as canola, and flower gardens.

(such as the Varroa mite), disease, and other stress factors (such as habitat loss, poor

The AGRICULTURE INDUSTRY HAS A VESTED INTEREST IN PROTECTING POLLINATORS and is committed to thoroughly researching and protecting bee health.

What Is Causing Elevated Over-Wintering Honey Bee Losses In Canada?

Over the past four or five years, OVER-WINTERING HONEY BEE LOSSES HAVE BEEN HIGH-ER THAN NORMAL (in the range of 20 to 40 per cent nationally, compared to the more typical 15 per cent).

Losses of bee colonies have been VARIABLE among the

RESEARCHERS HAVE NOT IDENTIFIED A SINGLE CAUSE OF THESE LOSSES.

PARASITIC MITES (specifically the Varroa mite) and MAIN FACTORS.

... lack of genetic diversity, climate change, pest control products, and stress-

Nonetheless, early Canadian figures from 2011/2012 indicate a SIGNIFICANT IMPROVE-MENT IN OVER-WINTERING LOSSES, likely due to the mild winter and better disease con-

What Is Bee Colony Collapse Disorder (BCCD)?

Numerous bee-keeping experts believe that Bee Colony Collapse Disorder (BCCD) symptoms have not been reported in Canada.

Bee Colony Collapse Disorder is a term used to describe a very specific set of symptoms, characterized by the SUDDEN DISAPPEARANCE OF WORKER BEES from a colony, leaving

RESEARCHERS HAVE NOT BEEN ABLE TO IDENTIFY A SINGLE CAUSE OF BEE COLONY COL-LAPSE DISORDER.

NATION OF FACTORS, including parasitic mites and diseases.

Many researchers suspect that INVASIVE PARASITIC MITES have WEAKENED BEES' DE-FENSES, making them more susceptible to diseases or other environmental factors.

Bee Colony Collapse Disorder is a separate issue from over-wintering losses and acute poi-

While some over-wintering loss is normal, the levels experienced by some professional bee-

How Are Pest Control Products Regulated To Ensure They Do Not Harm Bees?

All pest control products go through a RIGOROUS TESTING PROCESS to ensure THEY CAN BE USED WITHOUT CAUSING HARM TO HUMANS OR THE ENVIRONMENT.

This process includes more than 200 SEPARATE STUDIES that test a range of health and

The results of these studies help determine the instructions for use that appear on the

As scientific information evolves, pest control products are continuously re-evaluated to ensure they meet the latest safety standards.

Is There Any Connection Between Neonicotinoid Insecticides and Long-Term Honey Bee Losses In Canada?

There is NO EVIDENCE TO SUGGEST A LINK between neonicotinoid insecticides and longterm honey bee losses in Canada.

There is NO GEOGRAPHICAL CORRELATION between long-term bee losses and insecticide

Although some neonicotinoid insecticides are toxic to bees upon direct contact (as are many insecticides), they are used in a way that MINIMIZES ANY DIRECT EXPOSURE TO

Under normal field use, THE EXPOSURE TO BEES IS AT VERY LOW LEVELS, FAR TOO LOW TO CAUSE HARMFUL EFFECTS.

Independent, long-term, controlled field tests have repeatedly shown NO EFFECTS on bee mortality, weight gain, worker longevity, brood development, honey yield, and over-winter survival relative to bees in areas where treated seed was not used.

Many of these studies have been published in peer-reviewed journals and presented at international conferences.

was published in the Journal of Economic Entomology, 100(3): pages 765-772 (2007).

CropLife Canada — Facts About Honey Bee Health and Pesticides

What About Recent Studies That Claim Neonicotinoid Insecticides Are A Principle Cause Of Pollinator Decline?

The weight of the scientific evidence clearly shows that neonicotinoid insecticides DO NOT AFFECT LONG-TERM COLONY HEALTH.

A few recent studies have claimed some impact on bees, but a careful evaluation of the research shows SIGNIFICANT ERRORS were made in the experimental design, or INCORRECT CONCLUSIONS were drawn from the data.

Can Agriculture And Bees Really Co-Exist?

Bees and pest control products are VERY MUCH COMPLEMENTARY — both are essential to the success of agriculture.

More than one-third of the world's food production comes from crops that depend on polli-

Modern crop protection products are critical tools that farmers use to protect their crops from potentially devastating pests.

In fact, WITHOUT PEST CONTROL PRODUCTS, the world would LOSE AT LEAST 40 PER CENT OF ITS FOOD SUPPLY.

Our industry is committed to the developing products that allow Canadian farmers to grow food in an environmentally sustainable manner.

For example, SEED TREATMENT INSECTICIDES evolved as a way to protect seeds and crops while also MINIMIZING POTENTIAL EXPOSURES of non-target insects such as bees.

Indeed, these modern seed-applied insecticides have been used for a decade WITH ALMOST NO INCIDENCES OF NEGATIVE IMPACTS ON BEES.

LESS THAN 1 PER CENT OF THE FIELD IS TREATED WHEN A MODERN SEED TREATMENT IS

man and environmental exposures) throughout the growing season.

Furthermore, in Canada, the climate is such that most years TREATED SEED IS PLANTED DURING A PERIOD WHEN BEES ARE NOT ACTIVELY FORAGING.

CropLife Canada — Facts About Honey Bee Health and Pesticides

What Role Do Farmers Play In Ensuring Bees Are Protected From Insecticides?

Farmers understand the tremendous importance of pollinators to the success of modern ag-

During planting, farmers can limit dust when pouring seed into the planter; properly dispose

Growers plant only during proper weather conditions, they take precautions when planting near flowering crops and they control flowering weeds in their fields prior to planting.

CropLife Canada is the trade association representing manufacturers, developers and distributors of pest control products, including those designed specifically for urban use.

We are living in the 9|11 Era of Anti Pesticide and Environmental Terrorism where at least ONE SUBVERSIVE ACT OF TERROR is Perpetrated EVERY SINGLE DAY by enviro lunatics.

We are living in the DARK AGE OF ANTI PESTICIDE TERRORISM where sound science is trumped by FAKE SCIENTISTS, JUNK SCIENCE and UNVERIFIABLE SECRET EVIDENCE through FABRICATION, INNUENDO, and INTERNET RUMOUR — scientific research PROVES that pest control products CAUSE NO HARM and can be USED SAFELY.

NORAHG is the National Organization Responding Against HUJE that seek to harm the Green space industry.

NORAHG morally represents the VAST SILENT MAJORITY of people associated with turf and ornamental plant maintenance who are OPPOSED to Anti Pesticide PROHIBITION and the CLO-SURE of green spaces under the RIDICULOUS PRETEXT of somehow « saving » the environment

NORAHG is a NATIONAL NON PROFIT NON PARTISAN organization that does not accept money from corporations or governments or trade associations, and represents NO VESTED INTERESTS WHATSOEVER.

NORAHG is dedicated to reporting the work of RESPECTED and HIGHLY RATED EXPERTS who promote ENVIRONMENTAL REALISM and PESTICIDE TRUTHS.

Anti Pesticide HUJE are enviro lunatics and lawn haters who particularly DESPISE the golf industry — they are Hateful Underhanded Jokes as Environmentalists who have been WRONG FOR OVER 50 YEARS.

There is NO RECOURSE but LITIGATION against Anti Pesticide HUJE.

Another RECOURSE is to SEEK the CANCELLATION of GOVERNMENT GRANTS and REVO-CATION of the TAX EXEMPT STATUS of Anti Pesticide Organizations.

HUJE should Get OFF Our grASS, and they should Roast In Hell.

NORAHG manages the Library of Force Of Nature Reports and References, which is a VAST AR-CHIVE of REPORTS, MEDIA REFERENCES, AUDIO CLIPS, and VIDEOS on ALL Anti Pesticide Terrorist Acts of Subversion.

The purpose of this ARCHIVE is to provide information that will lead to a SUCCESSFUL LITIGATION AGAINST Anti-Pesticide Organizations

All names, statements, activities, and affiliations have been ARCHIVED for the intention of eventua CRIMINAL CHARGES.

When CRIMINAL CHARGES for FRAUD and CONSPIRACY are laid, legal experts say that the ARCHIVE is sufficient to lead to a SUCCESSEUL PROSECUTION!

NORAHG also produces FORCE OF NATURE, reports that present THE WHOLE TRUTH FROM AN INDEPENDENT PERSPECTIVE about environmental issues, including anti-pesticide terrorism.

FORCE OF NATURE is a series of reports destined for the green space industry, the environmental terrorist movement, governments, and the media, nationwide across Canada, the United States, and overseas

FORCE OF NATURE is committed to SOUND SCIENCE, as well as ground breaking original reporting that informs, entertains, and creates real change.

FORCE OF NATURE was launched for CONTINUOUS transmission on the Internet on January 1st 2009 — however, the VERY FIRST Stand-Alone FORCE OF NATURE Report was issued on September 19th 2008

By early 2009, the reports were released no more than five times per week, but by August 25th, 2009, FORCE OF NATURE was produced on a DAILY basis.

On March 15th, 2010, Uncle Adolph independently launched the Blog-Site called The Pesticide

By May 27th, 2010, Uncle Adolph expanded Pesticide Truths to a SECOND Blog-Site, and independently acquired the rights to archive the ENTIRE FORCE OF NATURE Library of Reports

By mid-December 2010, ENTIRE FORCE OF NATURE Library of Reports was FULLY SUMMA
