

ALPHA

Creeping Bentgrass

CHARACTERISTICS

Alpha *Agrostis stolonifera* is the first of a new generation of creeping bentgrass, with qualities never before seen in golf turf:

- “Championship greens without the championship maintenance”
- Ball marks, divots heal rapidly
- Unparalleled ground coverage and density
- Dollar spot resistance equal to the best
- Rich green color
- Makes visible gains on *Poa annua* each year
- Great for GREENS, TEES and FAIRWAYS!

PERFORMANCE HIGHLIGHTS

“The Fore!giving Bentgrass” – The single biggest factor that sets **Alpha** apart is ground coverage. **Alpha** retains ground coverage under some incredibly tough growing conditions. With its exceptional shoot density, **Alpha** sets a new standard for putting green turf: truer putting, more fullness, and a more visually appealing surface. Yet it is remarkably easy to maintain earning it the “Fore!giving Bent” title for excelling even when climate or cultural practices may not be ideal.

Aggressive against Poa – At Jacklin Seed, we test every single bent strain in our breeding program against *Poa annua*. If it can’t hold up against *Poa*, we pitch it. All of the plants that went into **Alpha** excelled at keeping *Poa* at bay. In fact, they made visible gains against *Poa* every year.

Optimized for the mid-budget golf course – Unlike some earlier bents, **Alpha** was bred and optimized with the mid-budget golf course in mind. **Alpha** provides tournament-quality golf for every golf course.

Recommended Seeding Rate:

New Seeding: 1-2 lbs. per 1000 ft² (5-10 g/m²)

Interseeding: 2-4 lbs. per 1000 ft² (10-20 g/m²)

and follow Dr. Brede’s interseeding guidelines for timing and methods.
