## How reduced fertilizer has benefited my golf course.

Today I was honored to be a part of the EIFG panel discussion at the Golf Industry Show. My presentation was about how reduced fertilizer has benefited my golf course as I have implemented the MLSN soil guidelines and used the growth potential formula.

Obviously the biggest impact of using less fertilizer is that you spend less money buying fertilizer. This is just the tip of the iceberg though. I have seen impacts such as less weeds, disease and fuel use. When I think of it, there have actually been no negative impacts.

Check it out below.
