▶ Description for Areas Regulated for the Emerald Ash Borer

To slow the spread of the emerald ash borer (EAB) to new areas, the CFIA uses measures to control the movement of potentially infested materials. People who move regulated materials from regulated areas without the permission of the CFIA could face fines and/or prosecution.

In addition the regulated areas listed above, the movement of materials can also be regulated through legal notices issued to property owners. For properties where EAB has been confirmed, a Prohibition of Movement is issued, which prohibits movement of regulated materials from that specific property. **Contact your local**

Canadian Food Inspection Agency office for additional information.

Continental United States
