

## What do global **regulatory** and **research agencies** conclude about the health impact of GLYPHOSAT

**Risk Assessment** What is the likelihood this will cause harm, based on dose and exposure?

SEEPA United States Environmental Protection Agency USA	"Human health risk assessment concludes that glyphosate is not likely to be carcinogenic to humans [and] no other meaningful risks to human health when the product is used according to the pesticide label"	2017
<b>EXAMPLE 1</b> United States Environmental Protection Agency Office of Pesticide Programs	"Not strong support for 'suggestive evidence of carcinogenic potential' based on the weight-of-evidence Even small, non-statistically significant changes were contradicted by studies of equal or higher quality. The strongest support is for ' <b>not likely to be carcinogenic</b> to humans'"	2017
National Toxicology Program U.S. Department of Health and Human Services	" <b>Little evidence of toxicity</b> , and there was no evidence of glyphosate causing damage to DNA"	1992
	"Products containing glyphosate <b>do not present unacceptable risks to</b> <b>human health</b> or the environment when used according to the revised product label directions Risks to [occupational] handlers are not of concern for all scenarios"	2017
Health Canada Canada	" <b>No pesticide regulatory authority</b> in the world currently <b>considers</b> <b>glyphosate to be a cancer risk</b> to humans at the levels at which humans are currently exposed"	2019
EUROPEAN CHEMICALS AGENCY EUROPE	"Based on the epidemiological data as well as on data from long-term studies in rats and mice, taking a weight of evidence approach, <b>no</b> <b>hazard classification for carcinogenicity</b> is warranted"	2017
<b>European Food Safety Authority</b>	"Glyphosate is <b>unlikely to be genotoxic or to pose a carcinogenic</b> <b>threat to humans</b> Neither the epidemiological data nor the evidence from animal studies demonstrated causality between exposure to glyphosate and the development of cancer in humans"	2015
anses agence nationale de sécurité sanitaire alimentation, environnement, travail France	<b>"Level of evidence of carcinogenicity</b> in animals and humans is considered to be <b>relatively limited</b> and does not allow for a 1A or 1B classification (known or suspected carcinogen for humans)"	2016
Bundesinstitut für Risikobewertung Germany	"Available data <b>do not show carcinogenic or mutagenic properties</b> of glyphosate nor that glyphosate is toxic to fertility, reproduction or embryonal/fetal development in laboratory animals"	2015
Federal Department of Home Affairs FDHA Federal Food Safety and Veterinary Office FSVO Switzerland	"Residues of glyphosate in the foods investigated <b>do not represent a</b> risk of cancer"	2018
Australian Government Australian Pesticides and Veterinary Medicines Authority Australia	"Glyphosate <b>does not pose a carcinogenic risk</b> to humans Products containing glyphosate are safe to use as per the label instructions"	2016
Environmental Protection Authority Te Mana Rauhī Taiao New Zealand	<b>"Unlikely to be carcinogenic</b> to humans or genotoxic (damaging to genetic material or DNA) and should not be classified as a mutagen or carcinogen"	2016
Agência Nacional de Vigilância Sanitária Brazil	"No evidence to indicate that the herbicide glyphosate is carcinogenic"	2019
Food Safety Commission of Japan Japan	<b>"No</b> neurotoxicity, <b>carcinogenicity</b> , reproductive toxicity, teratogenicity, and genotoxicity"	2016
Rural Development Administration Korea	"Epidemiological studies on glyphosate found <b>no cancer</b> link"	2017
World Health Organization World Health Organization of the United Nations Global	"Glyphosate is <b>unlikely to be genotoxic at anticipated dietary</b> <b>exposures</b> . Glyphosate is unlikely to pose a carcinogenic risk to humans from exposure through the diet"	2016
World Health Organization Drinking-water quality guidelines Global	"Under usual conditions, the presence of glyphosate and AMPA [aminomethylphosphonic acid, glyphosate's primary metabolite] in drinking-water <b>does not represent a hazard</b> to human health"	2004
World Health Organization International Programme on Chemical Safety Global	"Available data on occupational exposure for workers applying Roundup indicate <b>exposure levels far below</b> the NOAELs [no observed adverse effect levels] from the relevant animal experiments"	1994
Longitudinal Study How glyphosate impacted 54,251 pesticide applicators since 1993.		
Agricultural Health Study USA	"No association was apparent between glyphosate and any solid tumors or lymphoid malignancies overall, including non-Hodgkin's lymphoma and its subtypes some evidence of increased risk of AML [acute myeloid leukemia] among the highest exposed group that requires confirmation"	2018
Hazard Assessment What is the potential to cause harm, regardless of dose or exposure?		
International Agency for Research on Cancer World Health Organization	<ul> <li>"Limited evidence in humans for the carcinogenicity of glyphosate Evidence in humans is from studies of exposures, mostly agricultural [e.g. not from dietary exposure] A positive association has been observed for non-Hodgkin lymphoma There is 'strong' evidence that exposure to glyphosate or glyphosate-based formulations is genotoxic"</li> <li>IARC placed glyphosate in its hazard category "Group 2A: probably carcinogenic to humans" along with red meat, hot beverages, and working as a barber. The evidence on carcinogenicity was less robust than for</li> </ul>	
Global	agents such as bacon, salted fish, oral contraceptives and wine.	2015
