## Background Information

**CITY OF EDMONTON & GRAZING ANIMALS** — Edmonton is the capital city of the province of Alberta, where the practice of animals exploited for mowing and weed suppression has been a dismal failure ! Animals exploited for mowing and weed suppression practices are toxic and dangerous, and must be **STOPPED**, forever ! This green alternative practice has **NO** place in the urban environment.

## Goats Are Not Coming Baaa-ck To Edmonton

### **Getting Rid Of Goats Proves That Edmonton's Doomed-To-Fail Prohibition Against Pest Control Products Is A Dismal Failure**

The city of Edmonton will be down one tool this year to tackle invasive weeds with the end of the three-year goat pilot project at Rundle Park last year.

About 400 goats roamed the park for three summers eating weeds as an environmentally-friendly method to control the spread.

Goats WILL NOT BE BACK this summer.

The city said it will take this time to monitor the effectiveness of the pilot project before making future decisions.

According to a spokesman —

*As part of this evaluation, weeds at the GoatWorks site at Rundle Park will be monitored.*

*Weed control in the city will be performed according to the Integrated Pest Management policy and as resources allow.*

Residents are encouraged to report invasive weeds found on their own property and on city land through the 311 app, and remove them.

## Baah-Bye To Goats As Pilot Project Wraps Up In Edmonton

Edmonton is WAVING GOODBYE TO ITS BLEATING FOUR-LEGGED VISITORS, as the three-year GoatWorks pilot project, which saw hundreds of goats munch on noxious weeds at Rundle Park, [ has been proven to be a dismal failure, and ] comes to an end next week.

Whether the goats come back in future years depends on the results of a report from a research group at Olds College, expected by the end of the year.

The report will examine whether the goats were effective in managing noxious weeds.

The pilot project was conducted in Rundle Park to test a more environmentally-conscious [ but also, dangerous and ineffective ] method of weed control.

In other parts of town, the city [ dispatches ] workers to hand-trim or mow weeds or applies herbicide to deal with the pesky plants.

A woman wearing a wide-brimmed hat and a dark top stands in a field of white flowers. The background is a dense forest. The text is overlaid on the image in a large, bold, white font with a black outline.

# Grazing Animals Exploited For Weed Suppression Are Not Coming Baaa-ck To Edmonton

FORCE OF NATURE | DARING TO DEFY BY EXPLORING THE WHOLE TRUTH FROM AN INDEPENDENT PERSPECTIVE

# Grazing Animals

Animals Exploited For Mowing &  
Weed Suppression Practices Are  
Toxic & Dangerous, & Must Be  
Stopped, Forever

Grazing Animals Are A  
Continuous & An Unhygienic  
Source Of Crap & Urine, Turning  
The Property Into A Germ-Filled  
Toilet For Children To Play On

## Feces-And-Urine-Polluting Animals

Several cities have had successful weed control using grazing animals, like goats and sheep ?!?!

**WRONG !**

The practice of grazing animals exploited for mowing and weed suppression has been a **DISMAL FAILURE !**

Here are the reasons why ...

- Grazing animals expel dangerous disease-contaminated feces and urine
- They also continuously defecate crap mixed with grass and seed
- They destroy children's playing surfaces with their toxic waste and with their hooves
- They destroy the urban environment
- They **DO NOT** effectively control destructive and invasive weeds — weeds can **ONLY** be **TEMPORARILY** suppressed.

## Toxic And Dangerous Animals

Observers ask the following questions ...

- Do we want our children exposed to filthy and aggressive grazing animals that continuously expel toxic crx̂p and toxic urine ?!?!
- Will these grazing animals not represent a serious threat to our children ?!?!
- Do we not now live in the era of coronavirus ?!?!
- Do we need **MORE** deadly pathogens ?!?!
- Should we not want safe environments for our children ?!?!
- Are supporters of grazing animals fit to take care of our kids ?!?!

Grazing animals exploited for mowing and weed suppression practices are **TOXIC AND DANGEROUS**, and must be **STOPPED**, forever !

This green alternative practice has **NO** place in the urban environment.

We **DO NOT** need grazing animals to replace conventional pest control products.

## No-Risk Pesticides

**NO** harm will occur when conventional weed control products are used according to Health Canada's Approved Pesticide Product Labels.

The risk assessments of these products indicate that they are practically-non-toxic.

There is **NOT ONE** known incident report of harm from the proper use of weed control products used in the urban landscape.

These products are scientifically safe, will cause **NO** harm, and are **NOT** toxic and are **NOT** dangerous.

The instruction and safety precautions that appear on Health Canada's Approved Pesticide Product Labels are there to protect you and the environment.

Read Health Canada's Approved Pesticide Product Labels.

Read the Re-Entry Intervals on these Product Labels.

These are necessary to ensure that any pest control product residues on the treated turfgrass surfaces **DO NOT** pose an unacceptable risk to human health.

About NORAHG

## We Speak The Whole Truth About Grazing Animals From An Independent Perspective

We are the National Organization Responding Against HUJE that conspire to destroy the Green space and other industries ( NORAHG ). As a non-profit and independent organization, we are environmentalists who are dedicated to reporting about truth-challenged pesticide-hating fanatxcs ( HUJE ) who conspire to destroy businesses that are dependent on the use of safe and effective conventional pest control products. We also report on the work of several highly-rated leading experts who have recognized expertise, training, and background in matters concerning pest control products, and who promote environmental realism and pesticide truths. <https://wp.me/p1jq40-8DV>

Not surprisingly, enviro-fanatxcs have demonstrated that they are incapable of processing overwhelming scientific evidence. Should we trust these fanatxcs, who conveniently ignore scientific evidence, and attempt to impose their politicized-doctrines and twisted life-style choices against our society ?!?!

NORAHG was the brain-child of Mr William H Gathercole and his colleagues in 1991. Mr Gathercole is now retired, although his name continues to appear as founder. We dare to defy the pesticide-hating fanatxcs by exploring the whole truth from an independent perspective on The Pesticide Truths Web-Site ... <http://pesticidetruths.com/> If you wish to receive free reports on issues that concern you, please contact us at ...
